EMMANUEL KALAMA

Full-Stack Web Developer | Front-End & Backend Engineer

JavaScript • React • Python • APIs & Backend Logic • Web3 / DeFi

Lagos, Nigeria | +234 704 199 4782 | emmydwest167@gmail.com | Portfolio | GitHub

PROFESSIONAL PROFILE

Full-stack web developer with 5 years of hands-on experience designing, building, deploying, and supporting responsive websites and web applications. Strong practical background across front-end development, backend application logic, API integration, JavaScript, React, HTML, CSS, Python, and Web3 / DeFi interfaces.

Experienced in taking products from early concept and wireframe through interface implementation, server-side or API-connected functionality, testing, deployment, and iteration. Recent work includes founder-led creative platforms, client websites, a financial-services marketing site, staking dashboards, NFT interfaces, community products, and technical support for Web3 users. Brings engineering execution, visual judgment, product thinking, and clear communication with designers, founders, clients, and non-technical stakeholders.

CORE STRENGTHS

Product ownership End-to-end delivery from idea, information architecture, and UI build to deployment and iteration.	**Full-stack engineering** Responsive interfaces plus backend logic, API-connected features, data flows, deployment, and cross-browser awareness.
Web3 integration Wallet connection patterns, staking and reward interfaces, NFT mint / claim flows, and live activity displays.	**Communication** Clear client updates, technical documentation, user onboarding, issue diagnosis, and plain-language support.

TECHNICAL TOOLKIT

JavaScript (ES6+) • React • HTML5 • CSS3 • Python • Backend application logic • API endpoint and REST integration concepts • Data-flow handling • Wallet-connect integration • Staking / reward UI • Live token-price feeds • Git • Vercel • Responsive and mobile-first design • Cross-browser debugging • Technical documentation • Telegram, Discord, and Twitter/X community operations • Canva and CapCut

PROFESSIONAL EXPERIENCE

Founder & Full-Stack Developer | Project Ashabi

2025 – Present

- Founded and developed an independent story-platform startup focused on creator-led African comics, graphic novels, and serialized fiction for page, screen, and beyond.

- Designed and built the public-facing product end-to-end, including information architecture, hero and vision sections, responsive layouts, image galleries, team content, and partnership contact flows.
- Led technical direction alongside the co-founding team, translating a creative and business vision into a working digital product for partner and investor conversations.
- Owned content structure, visual presentation, creator outreach flow, deployment, and ongoing product iteration on Vercel.

Web Developer — Client Projects | Billions Network

Freelance

- Built three original front-end websites for a gaming-focused brand, a studio / company presence, and a portfolio-style showcase.
- Translated brand direction and content into custom interfaces using JavaScript, React, HTML, and CSS rather than relying on copied templates.
- Managed the full build cycle for each site, including layout decisions, responsive behavior, content integration, visual refinement, debugging, and deployment.

PROFESSIONAL EXPERIENCE — CONTINUED

Web Developer — Web3 / DeFi Front-End | Independent Projects

2025 – 2026

- Built front-end interfaces for Web3 products, including staking dashboards and NFT-focused platforms with wallet connection, live pricing, activity feeds, and reward displays.
- Implemented user-facing staking mechanics such as stake / unstake flows, APR presentation, token balances, transaction states, and reward tracking.
- Connected front-end components to live on-chain and price-feed data while keeping the experience understandable for users with varied technical backgrounds.
- Developed the interface layer for the Maximals staking platform and built Origin's NFT mint / claim-style experience with wallet-connect, mint-flow UI, and live activity / status states; deployed on Vercel.

Web Developer | TAGID

January 2025 – March 2025

- Built the TAGID project website while also managing the project's Telegram, Discord, and Twitter/X community of approximately 500 members.
- Combined front-end development with day-to-day product ownership, including onboarding content, announcements, community education, and live Twitter Spaces sessions.
- Used direct user feedback and recurring questions to improve how the platform was explained and presented to the community.

Technical Support & Community Roles | Noir, Rebvelka, Boinkers

2025 – Present

- Resolve approximately 10–15 technical support tickets per day across Telegram-based support channels, diagnosing wallet, transaction, account, and platform issues for crypto / Web3 users.
- Translate technical fixes into clear, step-by-step instructions for users with a wide range of technical backgrounds.
- Collaborate with distributed international teams, including a Russian-led engineering team on Rebvelka, in a fast-moving remote environment.

- Moderate active online communities, maintain a respectful environment, identify recurring issues, and surface patterns that can improve internal support processes.

LIVE PORTFOLIO PROJECTS

TAG Dashboard tag-nft-project-pbwt.vercel.app/dashboard DeFi dashboard with wallet integration, points tracking, and community leaderboard features.	**Maximals Staking** maximals-project.vercel.app NFT staking platform with digital collectibles, reward mechanics, and an elegant product interface.
Oranguin oranguin.vercel.app Animated memecoin landing page focused on visual storytelling, brand presentation, and engaging motion.	**TagTribe Profile** tagtribe1.vercel.app/profile Gamified community profile system with experience levels, badges, achievements, and social features.
Billions Playground billions-playground-bydvm.vercel.app AI / human verification network landing page presenting a product connected to a large verified-user ecosystem.	**Billions Brochure** billions-brochure.vercel.app Privacy-first verification product presentation covering ZK proofs, social, liveness, uniqueness, and KYC / AML flows.

Additional live work: Project Ashabi • Janet Jo Ann Brandt

SKILLS & CAPABILITIES

Languages & frameworks JavaScript (ES6+), React, HTML5, CSS3, Python	**Full-stack development** Responsive layouts, mobile-first design, component architecture, backend logic, data flows, reusable interface patterns, cross-browser troubleshooting
Web3 / product integration Wallet-connect integration, staking and reward displays, token balances, APR presentation, NFT mint / claim flows, live activity feeds, live price-feed concepts	**Backend & APIs** Python-backed application logic, REST API concepts, endpoint integration patterns, live data presentation, transaction and loading-state communication
Tooling & deployment Git, Vercel, deployment workflows, debugging, visual QA, content integration, portfolio and project presentation	**Communication & operations** Technical support, issue diagnosis, documentation, user onboarding, client communication, stakeholder updates, community moderation
Community & creative support Telegram, Discord, Twitter/X, live Spaces support, Canva, CapCut, visual asset preparation	

EDUCATION

Sikiru Adetona College of Education |

2025 – Present

Royal Priesthood Secondary School | Secondary Education

2018 – 2024

AVAILABILITY & ROLE PREFERENCES

Based in Lagos, Nigeria and available for full-time remote, freelance, contract, and distributed-team opportunities across time zones. Open to Full-Stack Developer, Backend / API Developer, Front-End Developer, Web Developer, Web3 / DeFi, and technical product-support roles. Comfortable owning deliverables independently or with a cross-functional team, from responsive interface and backend / API work through deployment and maintenance.
